

MICROFIBRE FABRIC CARE

Regular Care

Protect from direct sunlight.

Vacuum routinely with a soft brush attachment to remove dust and debris. Use low suction to avoid damage to the fabric.

Keep at least 30cm away from direct heat sources.

Cleaning

Remove liquid spills immediately by blotting with a clean dry cloth or paper towel.

Do not rub.

Do not remove cushion covers for cleaning, even when zippers are present.

On-site hot water extraction cleaning and on-site dry cleaning are suitable but it is recommended that a professional cleaning service be used for these methods.

Use only upholstery detergents.

Dry in shade away from direct heat.

Allow to dry thoroughly before use.

Spot Cleaning

Mop up any excess spilt material as soon as possible.

Proprietary brand cleaning agents, used as described in manufacturer's instructions, provide the best cleaning solution.

Dry cleaning solvent may be used with care. Test in small hidden area first.

Ensure fabric and filling are not saturated.

For difficult to remove marks seek professional advice to avoid damaging fabric.

Do not use bleach.

Pilling

This may occur as a result of regular use. It is not a fault and can be carefully removed with a battery operated fabric de-pilling shaver.

Shading

Shading may result following disruption of the orientation of pile fibres, for example after being sat on. Shading is a characteristic of the fabric and should not be considered a fault.
